DETAILED ACTION

Information Disclosure Statement

The prior art documents submitted by applicant in the Information Disclosure Statement filed on May 12, 2006 have all been considered and made of record (note the attached copy of form PTO-1449).

Drawings

The drawings are objected to because Figures 1, 2, 3, 7 and 8 are blurry and it is difficult to make out details due to the shading and Figures 1-8 contain handwritten numbers and labels that are difficult to read. Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of

any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Specification

Applicant's cooperation is requested in correcting any errors of which applicant may become aware in the specification.

Allowable Subject Matter

Claims 1-27 are allowed.

The following is an examiner's statement of reasons for allowance: The prior art of record is the closest prior art known, however, the prior art of record does not disclose or reasonably suggest a locking component comprising a locking lug made of a flexible or elastomer material molded on a jacked optical cable, wherein upon insertion of the locking component into an inner housing, the locking component is movable in both forward and radial directions relative to the inner housing to position the at least one locking lug in a corner of the generally rectilinear inner housing such that the locking component and the inner housing are secured to each other in an axial direction, as required by independent claims 1 and 26 of the present invention. Claims 2-25 depend from claim 1 and claim 27 depends from claim 26.

Hence, there is no reason or motivation to use the prior art of record to make the invention of claims 1-27.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

Art Unit: 2874

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
